

2013 ETS Proficiency Profile Comparative Data Guide for Unproctored Administrations

The annual Comparative Data Guide (CDG) contains tables of scaled scores and percentiles for institutional means and individual student scores drawn directly from test takers across the nation. The CDG can assist you in interpreting the scores from the ETS® Proficiency Profile by helping you determine how your students' skills compare with the skills of students at similar institutions. The report provides descriptive statistics based on the number of students that have completed an unproctored version of the ETS Proficiency Profile between July 1, 2008 and June 30, 2013. Information about an institution gathered through ETS Proficiency Profile administrations cannot be released in any form attributable to or identifiable with an individual institution. The anonymity of each institution's performance is maintained by reporting only the aggregate performance of the selected reference group.

Below are descriptions of the various tables provided in this guide:

- **Institutional Means Total Score/Subscore Distributions** – The distributions in these tables present the number of institutions at each mean score level. These tables provide a way to compare the Total Score and Subscore means for your institution with those of other participating institutions. These tables show the mean of means (or the average of the mean scores for those institutions/programs selected) as well as the standard deviations of those means.
- **Individual Students Total Score/Subscore Distributions** – The distributions in these tables may be used to interpret results by determining what percent of those taking the test at the selected institutions attained scores below that of a particular student. Each table shows scaled score intervals for Total Score and Subscores separately. By looking up the Total Score or Subscore and reading across the row to the corresponding number in the column headed "Percent Below," the percent of individuals scoring below any interval can be determined.
- **Summary of Proficiency Classifications** – This table presents the percentage of students classified as "Proficient", "Marginal", and "Not Proficient" for each skill dimension and level. This table provides a way to compare the proficiency levels at your institution with the selected test taker population. Descriptions of the competencies and abilities measured at each Proficiency Level can be found at http://www.ets.org/proficiencyprofile/scores/proficiency_classifications/.

The following considerations should be kept in mind when interpreting comparative data:

- This data should be considered comparative rather than normative because the institutions included in the data do not represent proportionally the various types of higher education institutions and programs. The data are drawn entirely from institutions that choose to use the ETS Proficiency Profile. Such a self-selected sample may not be representative of all institutions or programs.
- The number of students tested and sampling procedures vary from one institution to another. Therefore, it is impossible to verify that the students tested at each institution are representative of all the institution's students in that program.
- Only those institutions testing 30 or more students in a college class were included in the analyses for that college class. Institutions with fewer than 30 test takers at that class level are excluded from these calculations.
- The score distribution used to compute the individual student level statistics has been modified, to prevent the statistics from being dominated by a few very large institutions. If an institution contributed more than 3800 students to this data set, the score of each of its students has been weighted by the fraction $3800/n$, where n is the number of students from that institution. For example, if an institution tested 7600 students, the score of each of its students would receive a weight of $3800/7600 = 1/2$. In computing the statistics, each of its students would count only half as much as a student from an institution that tested 3800 or fewer students. Therefore, an institution testing 7600 students would influence the statistics just as much as if it had tested only 3800 student

For more information about this report or other ways the ETS Proficiency Profile can help your program, contact an ETS Advisor at higher@ets.org or call 1-800-745-0269.

The following tables include tests taken as of June 30, 2013.

2013 Comparative Data Guide
Seniors (More than 90 semester hours or more than 145 quarter hours),
Four-year Colleges and Universities—Institution List

Data includes students from domestic institutions who tested between July 2008 through June 2013.

*The score distribution used to compute these statistics has been modified, to prevent the statistics from being dominated by a few very large institutions. If an institution contributed more than 1600 students to this data set, the score of each of its students has been weighted by the fraction $1600/n$, where n is the number of students from that institution. For example, if an institution tested 3200 students, the score of each of its students would receive a weight of $1600/3200 = 1/2$. In computing the statistics, each of its students would count only half as much as a student from an institution that tested 1600 or fewer students. Therefore, an institution testing 3200 students would influence the statistics just as much as if it had tested only 1600 students.

2013 Comparative Data Guide
Summary of Proficiency Classifications— Seniors (More than 90 semester hours or more than 145 quarter hours), Four-year Colleges and Universities
July 2008 through June 2013.

Total Number of Students	Weighted Number of Students
45,036	35,036*

Percent of Students Classified

Skill Dimension and Level	Classified as Proficient	Classified as Marginal	Classified as Non-Proficient
Critical Thinking	6%	13%	80%
Reading, Level 2	33%	17%	50%
Reading, Level 1	58%	18%	24%
Writing, Level 3	6%	23%	70%
Writing, Level 2	19%	31%	50%
Writing, Level 1	55%	28%	17%
Mathematics, Level 3	6%	13%	80%
Mathematics, Level 2	23%	22%	55%
Mathematics, Level 1	43%	23%	33%
